

## FedLine Direct<sup>®</sup> Message Connectivity Test Request

The FedLine Direct Message Connectivity Test is the validation of connectivity through a "round trip message" initiated by the customer's MQ server to the Federal Reserve Bank MQ server and back. The "round trip message" may be executed by using a script that the Federal Reserve Bank has provided to your institution or by manually placing a message onto a test queue strictly used for connectivity testing. This form must be submitted to the Customer Contact Center at least two (2) business days prior to your desired connectivity test date.

Please complete the required (\*) and other information fields below.

\*9-Digit Depository or Authorized Institution Routing Number [\_\_\_\_\_]

\*Depository or Authorized Institution Name [\_\_\_\_\_]
