

FedLine Command[®]

The FedLine Command Solution, one of our convenient Internet Protocol (IP)-based options, delivers access to critical payment services and is designed especially for organizations that require a highly secure computer-to-computer interface to the Federal Reserve Banks.

The FedLine Command Solution offers access to services, including:

- FedACH[®] payment and information services
- Accounting and Billing services
- Central Bank Services
- Fedwire[®] Statements

Key Features

Flexible Access Options

The FedLine Command Solution is designed to meet a wide range of business needs and allow you to control user access and delivery of services based on several key factors:

- Number of users in your organization
- Transaction volume
- Desired access speeds
- Networking preferences
- Structure of your operations

Greater Control

The FedLine Command Solution provides computer-to-computer interface, allowing you to fully automate your transaction and reporting processes from start to finish for ACH processing. A direct connection to Federal Reserve Financial Services via a FedLine Command Solution gives you greater control over your ACH payment operations.

Trusted Security and Reliability

Like all FedLine[®] Solutions, security is a top priority in the design of FedLine Command. Our FedLine Solutions incorporate highly resilient security features that are designed to create reliable protection for your business data, while providing flexibility to best meet your operational needs. Industry-standard, end-to-end encryption is automatically enabled to help ensure the confidentiality and integrity of all communications with the Federal Reserve Banks via the FedLine Command Solution.

Part of a Complete Contingency Plan

The FedLine Command Solution does not require an individual user to perform processing and reporting activities; thus, organizations can leverage its features as part of their contingency planning. In the event of a natural disaster or other emergency when processing facilities are inaccessible, pre-scripted instructions will help ensure that regular operations continue as normal for FedLine Command customers.

Easy Integration

The FedLine Command Solution is designed to minimize the changes required to your financial services applications and to your organization's infrastructure. It uses a Dedicated Wide Area Network (WAN) or Virtual Private Network (VPN) connection for transport and uses common, off-the-shelf software to support file transfer services. This solution is flexible and can be integrated with your existing technology platform to allow you to leverage technology investments and realize the efficiencies offered by fully automated end-to-end processing.

Technical Requirements

FedLine Command uses:

- Dedicated WAN or VPN connections
- Windows®
- Linux® or UNIX® servers
- Secure Client software

Robust Customer Support

Our dedicated team of technical analysts will work with your institution to explain technical requirements for the setup process and work with your technical staff throughout the implementation process. Once implementation is complete, you can still count on our technical support team to provide the assistance you expect from the Federal Reserve Banks.
